

Your Brain Treats Your Phone Like a Savanna (Why You Can't Stop)

Total scenes: 229

Video Description

Every time you pick up your phone, your dopamine system fires the same signal it fired when your ancestors found food in the forest. You scroll not because you are satisfied, but because your ancient brain is convinced that the next swipe will finally bring the resource that allows it to stop.

This video explores the evolutionary mismatch of digital foraging -- why your inability to stop scrolling is actually an ancient seeking pathway that evolved to motivate search behavior in a resource-scarce world that no longer exists.

If you put a wild animal in a cage with unlimited food and flashing lights, it will eat itself to death. We have done the exact same thing to ourselves. How many hours did your screen time report show this week? Let's talk in the comments below.

Thumbnail Prompt

A split-screen visual. Left side: Warm sepia tones showing a prehistoric hunter-gatherer silhouette holding a spear in a wild savanna. Right side: Cool neon blue and purple tones showing a modern silhouette slumped over a glowing desk screen. Centered bottom text overlays bold white text reading: 'THE TRAP' with a yellow accent word: 'ANCIENT SOFTWARE'. High contrast, center focused, no realistic human faces, simple graphic design look.
